2-on-2 Bolt-on Platforms User Manual

When you're fitting a more robust onboard air system, the Viair 2-on-2 Bolt-On Platform kits offer a complete, high-output solution ready to install directly onto your vehicle.

These systems combine two high-performance Viair compressors with a 2.0 gallon, 5-port air tank, along with the required wiring, plumbing and mounting components — providing a reliable compressed air supply for tyres, air tools, lockers and air suspension systems.

The design of the 2-on-2 Bolt-On Platform makes installation straightforward. Depending on the model, you can choose from universal bolt-on kits or vehicle-specific platforms with dedicated mounting brackets. Each kit includes a pre-configured wiring harness and air manifold to simplify installation and ensure consistent performance.

The Viair 2-on-2 range includes well-known part numbers such as 30016 (High-Speed 150 PSI Universal) and 30018 (High-Pressure 200 PSI Universal), along with vehicle-specific options including 30001 and 30005. These kits are ideal for anyone looking to add a dependable onboard air solution for inflating tyres, operating pneumatic tools, powering air lockers or supporting air suspension setups.

In this post, you'll find the official Viair 2-on-2 Bolt-On Platform user manuals, giving you access to detailed installation, wiring and operating guidance so you can install and use your system with confidence.
